

ROCKSON

HARD SURFACE SOLUTIONS

New Feature

Rock Style

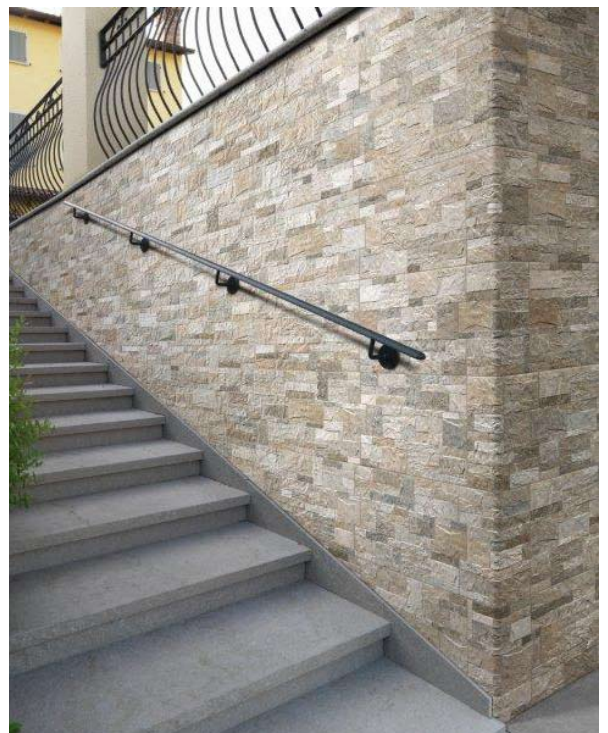

Rock Style porcelain panels perfectly reproduce the look of natural stone cladding.

With high quality technical characteristics, Rock Style is the ideal product to be used for internal & external wall decoration, including places where natural stone is unsuitable.

UV & frost resistant, Rock Style maintains its appearance over time, is easy to lay & clean, and does not require sealing or on-going maintenance, associated with natural stone products.

Each piece interlocks to minimise visible joints, creating a seamless look.

Application ideas include commercial & residential in and out door walls, including public spaces, foyers, food courts, shopping centres, kitchens, bathrooms, living rooms, courtyards and all cladding applications.

HARD SURFACE SOLUTIONS

Recap

Buxy Series - 14mm

The main characteristic of Buxy is the faithful reproduction of the calcareous stone. This result is obtained by the use of coloured salts which penetrate into the tile body, settling the pattern.

Inspired by the harmony of nature along with the unique blend of design excellence & technology, this beautiful series features 5 colour variations, to create the upmost in both classical and modern interiors.

Buxy triple-pressed porcelain stoneware is available in 3 surface finishes, for internal & external applications, and a range of sizes that include large format 594 x 1190mm and 895 x 895mm.
